

Chairman  
Federal Communications Commission  
Washington, D.C.

Dear Sir.

As a thirty four year member of the North American Shortwave Association and a thirty year technical monitor presently monitoring nine international shortwave radio broadcasters (Radio Australia, BBC World Service, China Radio International, Radio France International, Israel Radio, RAI-Italian Radio, Voice of Turkey, Voice of Russia, Radio Ukraine International) your adoption of Broadband over Power Lines would spell the end of shortwave radio listening in this country. It would cause horrific interference to all shortwave radio signals and would hamper thousands of radio listeners presently listening from keeping abreast of international events. It is estimated that now several millions listen to shortwave radio broadcasts. The adoption of this proposed FCC regulation would effect them and bring shortwave radio listening to a halt. Please do not allow this to happen.  
Thank you.

Cordially,  
George J. Poppin  
Retired High School Teacher
